

PVT hybrid collector

PVT hybrid collector provide both electrical and thermal energy.

PVT un glazed, 1,65 m²; produce:

- 265 Wp, el. Power
- 910 th. Wp / collector

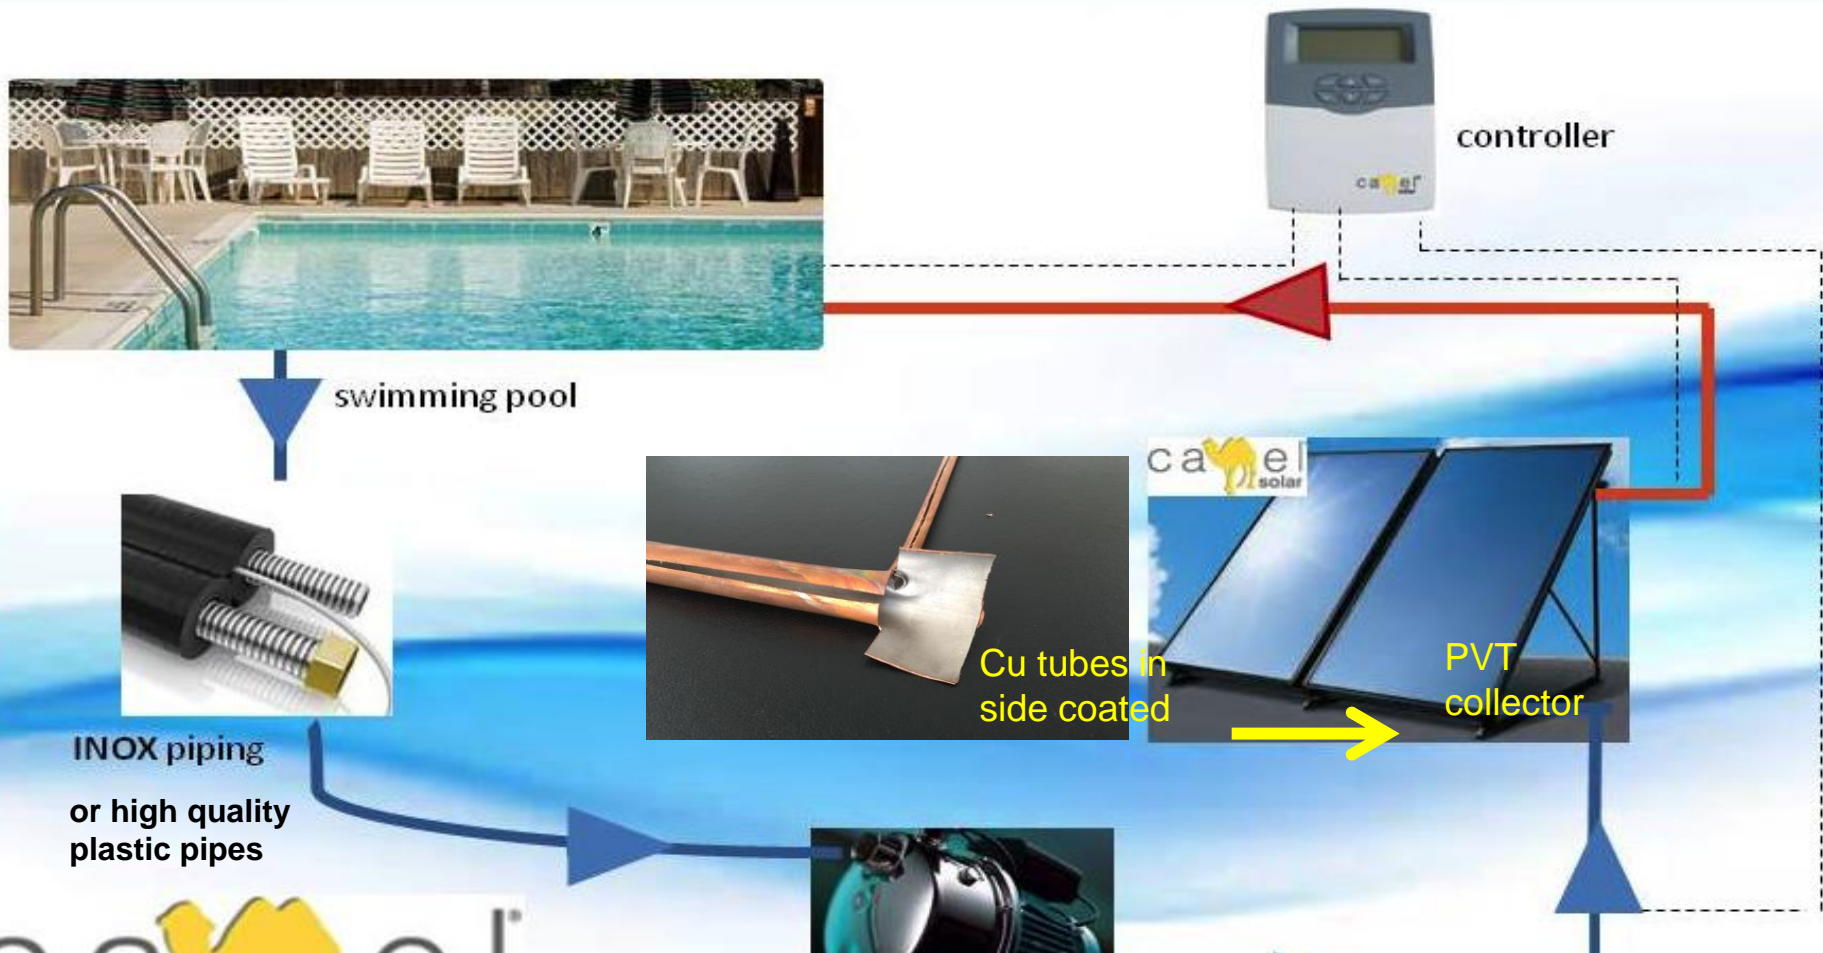

PVT glazed, produce more th. power but less el. power.

Innovation's

PVT efficiency is increased due to :

- **Better heat transfer** from EVA polymer to Al absorber and
- **Inner corrosive resistant coating** for direct circulation of swimming pools water ,

Combined PVT system with flat plate & concentrated collector

Maximum useful solar energy for all end users

Maximum reducing CO2 emission and air pollution /kWh
